

From Upwelling to Egglaying

Research in the Gulf of the Farallones

Sponsored by the Gulf of the Farallones National Marine Sanctuary &
Farallones Marine Sanctuary Association

WEDNESDAY, FEBRUARY 11, 2004

8:00 AM - 5:30 PM

CRISSY FIELD CENTER, PRESIDIO, SAN FRANCISCO

Join us for a day of presentations by researchers studying the extraordinary marine life, geology, and oceanography of the Gulf of the Farallones. Just a few miles from San Francisco, this National Marine Sanctuary's rich waters support populations of krill and other plankton, which in turn support major fish populations, marine mammals, sharks, and the largest concentration of breeding seabirds in the contiguous United States.

Researchers working in the Gulf of the Farallones, the Gulf of the Farallones National Marine Sanctuary, and adjacent waters are invited to submit an abstract and present their project(s) at the workshop. We will also have a special poster session for marine educators. You do not need to present to submit an abstract.

Registration & Abstract Deadline:
January 13, 2004

Registration is open to everyone.
FREE
